Knowledge Worker Automation.™

Make the Most of Your Organization's Most Valuable Assets
People, Projects & Intelligence

BOOST your bottom line from

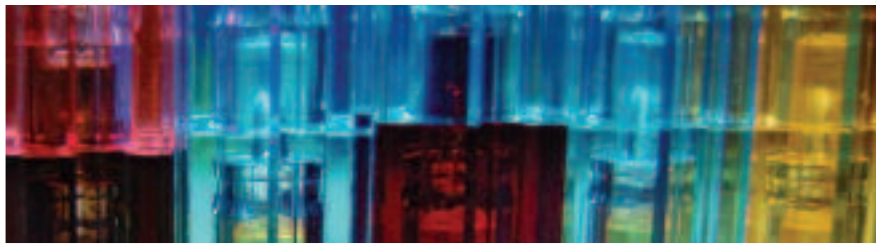

within

Create more value for your organization

... from the inside out

These days, corporate success is increasingly driven by human capital. People—and the services and expertise they provide—have become an organization's most valuable asset. From managers and employees to consultants and service vendors, the performance of these "knowledge workers" has a direct effect on an organization's bottom line.

Problem is, these knowledge workers often work in organizations that are large and inefficient. These service-driven organizations all too often only focus on delivering output rather than operating efficiently. **Until now.** Financial pressures have forced professional services firms and internal service organizations alike to take a closer look within... and smart businesses are quickly realizing that improving efficiency can deliver value across the entire organization.

Automate your knowledge worker organization

... with Intellilink Solutions

Intellilink Solutions can help you find company-wide value in previously untapped areas—enabling your entire organization to **plan better and work smarter**, and drive business success.

We enable organizations to leverage technology to facilitate the seamless coordination and deployment of human resources onto projects—while equipping them with the knowledge they need to be successful. Our step-by-step process identifies opportunities for improvement by assessing business strategy and existing operations, before designing a blueprint to implement and manage company-wide change.

Intellilink Solutions offers specialized expertise in automating knowledge worker organizations across a range of industries, backed by a team of subject-matter experts, proven methodologies, industry best-practices, and a history of success.

Our focus on value creation extends to our own enterprise as well. We have implemented highly advanced business processes and software tools that enable us to operate significantly more efficiently than the typical consulting firm—so we can deliver premium top-tier consulting services while establishing cost effective partnerships with our clients.

Intellilink At Work

IT Governance

Helped a market-leading **pharmaceutical conglomerate**, under increasing pressure to reduce costs, improve its world-wide IT governance capabilities through the use of a project portfolio management tool.

Workforce Management

Enabled a **global management consulting firm** to streamline project allocation and visibility by analyzing and improving its workforce management processes and systems.

Talent Acquisition

Guided a leading **US banking institution** in selecting and deploying an applicant tracking system (ATS) to enhance enterprise-wide recruiting processes and gain a competitive edge in the war for talent.

Change Management

Empowered an **international financial services firm** to increase user acceptance during the implementation of a resource and project management system across its worldwide IT organization.

Process Redesign

Worked with a **global advertising and branding agency**, under pressure to control costs, to increase the financial visibility of jobs by designing and implementing a job costing system.

Intellilink Solutions works with clients to better assess, manage and integrate the most valuable assets of their organizations:

People. The unique skillset that each person offers is critical to a project's success; and how they function as part of the workforce can impact the entire organization. The key is to find and recruit the right people (Talent Acquisition), maximize the allocation and use of their time and skills (Workforce Optimization) and help them effectively work together (Virtual Collaboration).

Projects. Individual projects blend human and knowledge capital to create the deliverables that ultimately translate into an organization's value. To keep each project running smoothly, it's important to effectively coordinate tasks and timelines (Project Management) and keep time, costs & budgets under control (Governance & Financial Management)—as well as look ahead to plan future work (Pipeline Management).

Intelligence. The most lasting asset of a knowledge worker organization is intellectual capital, which can be used and re-used to flatten the learning curve and increase efficiencies for future projects. This can be accomplished by capturing and managing knowledge items (Knowledge Management) and tracking and assessing enterprise performance metrics (Business Intelligence), as well as viewing and aligning project goals within the context of organizational objectives (Portfolio Management).

Enable lasting change with Intellilink's proven methodology

Our methodology delivers results. It combines our opportunity assessment toolkit and library of industry best practices with a phased approach that has been custom-designed to implement change within a knowledge worker organization.

01 ANALYZE

Evaluate existing processes and technology, then identify opportunities and develop a strategy to improve.

02 TRANSFORM Streamline business processes and define technology requirements to improve efficiency.

03 SELECT Match precise business and technology requirements to suitable vendor solutions.

04 DEPLOY Guide organizations through the implementation process, accounting for the nuances of both custom and packaged solutions.

05 MANAGE Mitigate risk by project planning, task allocation, issue tracking and status reporting throughout the entire implementation process.

06 CHANGE Ensure user adoption through the most sensitive, yet essential process of implementation.
